No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

growth human New human monoclonal antibody that binds to platelet-derived factor-D (PDGF-D), useful for treating chronic and recurrent diseases, such as inflammation, autoimmunity and cancer.

Disclosure; SEQ ID NO 29; 255pp; English.

The invention relates to a human monoclonal antibody that binds to platelet-derived growth factor-D (PDGF-D). The antibodies are useful for treating chronic and recurrent human diseases, such as inflammation, autoimmunity and cancer. The PDGF-D nucleic acids and polypeptides are useful for modulating collagen formation, and for stading various cancers. Antibodies to platelet-derived growth factor-D (PDGF-D) were generated using an active protein fragment of the gene product from the clone 30664188.0.99 arising in the conditioned medium obtained when HEX293 cells are transfected with the plasmid pCBF4/Sec-30664188. This sequence corresponds to a protein used in the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a human monoclonal antibody that binds to platelet-derived growth factor-D (PDGF-D). The antibodies are useful for treating chronic and recurrent human diseases, such as inflammation, autoimmunity and cancer. The PDGF-D nucleic acids and polypeptides are useful for modulating collagen formation, and for staging various cancers. Antibodies to platelet-derived growth factor-D (PDGF-D) were generated using an active protein fragment of the gene product from the clone 30664188. Opportable are transfected with the plasmid pCBP4/Sec-30664188. This sequence corresponds to a protein used in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     9

Human mAb 1.29 heavy chain variable region protein SEQ ID NO:38

17-JUN-2004 (first entry)

ADL25428;

```
The invention relates to a human monoclonal antibody that binds to platelet-derived growth factor-D (PDGF-D). The antibodies are useful for recating chronic and recurrent human diseases, such as inflammation, autoimmunity and cancer. The PDGF-D nucleic acids and polypeptides are useful for modulating collagen formation, and for staging various cancers. Antibodies to platelet-derived growth factor-D (PDGF-D) were generated using an active protein fragment of the gene product from the clone 30664188.0.99 arising in the conditioned medium obtained when HEX293 cells are transfected with the plasmid pCBF4/Sec-30664188. This sequence corresponds to a protein used in the invention.
                                                                                                                                                                                                                                                                                                  Weber R;
                                                                                                                                                                                                                                                                                                                                                    New human monoclonal antibody that binds to platelet-derived
                                                                                                                                                                                                                                                                                                                                                            factor-D (PDGF-D), useful for treating chronic and recurrent diseases, such as inflammation, autoimmunity and cancer.

binds plated the derived growth factor-DD (PDGF-DD), where the antibody is useful in preparing a medicament for treating nephritis. Also described:

(1) a method of detecting nephritis; (2) a method of treating nephritis;
of treating mesangial cell proliferation; and (4) a method of treating mesangial cell proliferation; and (4) a method of treating mesangial proliferative glomerulomephritis. The antibody has nephrotropic, antihilammatory, dermatological, immunosuppressive and antidiabetic activities, and can be used in gene therapy. The antibody or its binding fragment, that binds PDGF-DD, can be used in preparing a medicament for treating nephritis and related disorders, e.g., mesangial proliferative glomerulomephritis. The present sequence represents a human monoclonal antibody (mAb) variable region sequence, which is used in the

                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a novel method for treating a human subject for a cancer characterized by neoplastic B cell growth. The method comprises administering to the subject combination antibody therapy, which comprises an amount of an anti-CD40 antibody or its antigen-binding fragment in combination with an anti-CD40 antibody or its antigen-binding fragment, where the anti-CD40 antibody or antigen-binding fragment is gonist activity when bound to the CD40 antigen. The invention further comprises: methods of inhibiting the growth of a tumor comprising neoplastic B cells. The methods and compositions have cytostatic activity. The methods are useful for treating B cell-related cancer (e.g. lymphoma or leukemia) or in manufacturing medicaments for the treatment of such a disease. This sequence represents a heavy chain

The invention relates to a novel method for treating a human subject for a cancer characterized by neoplastic B cell growth. The method comprises administering to the subject combination antibody therapy, which comprises an amount of an anti-CD40 antibody or its antigen-binding fragment in combination with an anti-CD20 antibody or its antigen-binding fragment, where the anti-CD40 antibody or antigen-binding fragment, where the anti-CD40 antibody or antigen-binding fragment is free of significant agonist activity when bound to the CD40 antigen. The invention further comprises: methods of inhibiting the growth of a tumor comprising neoplastic B cells. The methods and compositions have cytostatic activity. The methods are useful for treating B cell-related cancer (e.g. lymphoma or leukemia) or in manufacturing medicaments for the treatment of such a disease. This sequence represents a heavy chain variant of a CHIR-5.9 human anti-CD40 antibody of the invention.
                                                          Treating human subjects for B cell-related cancers (e.g. multiple myeloma or Burkitt's lymphoma) comprises administering to the subject an amount of an antagonist anti-CD40 antibody in combination with an anti-CD20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           61 SPSFQGQATISADKSISTAYLQWSSLKASDTAMYYCARHVDVGATIGGYYYYYHGMDVWG 120

The specification describes a method of treating a human subject for chronic lymphocytic leukemia (CLL). The method comprises administering an amount of a human anti-CD40 monoclonal antibody that specifically binds to a human CD40 antiqen expressed on the surface of a human CD40-expressing cell and is free of significant agonist activity, where when the antibody binds to the CD40 antigen expressed on the surface of the cell, the growth or differentiation of the cell is inhibited. The human anti-CD40 monoclonal antibody is selected from CHIR-5.9 or CHIR-12.12. The method of the invention is useful for treating chronic lymphocytic leukemia or in manufacturing medicaments for the treatment of such anti-CD40 monoclonal antibody CHIR-5.9.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Treating human subjects for chronic lymphocytic leukemia comprises administering to the subject an amount of a human antagonist anti-CD40 monoclonal antibody that specifically binds to the CD40 antigen.
                                                                                                   chronic lymphocytic leukemia; CLL; anti-CD40 antibody; CD40; CHIR-5.9; CHIR-12.12; antibody therapy; heavy chain.

The specification describes a method of treating a human subject for chronic lymphocytic leukemia (CLL). The method comprises administering an amount of a human anti-CD40 monoclonal antibody that specifically binds to a human CD40 antigen expressed on the surface of a human CD40-expressing cell and is free of significant agonist activity, where when the antibody binds to the CD40 antigen expressed on the surface of the cell, the growth or differentiation of the cell is inhibited. The human anti-CD40 monoclonal antibody is selected from CHIR-5.9 or CHIR-12.12. The method of the invention is useful for treating chronic lymphocytic leukemia or in manufacturing medicaments for the treatment of such cliseases. The present sequence represents the heavy chain of human anti-CD40 monoclonal antibody CHIR-5.9.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              61 SPSFQGQATISADKSISTAYLQWSSLKASDTAMYYCARHVDVGATIGGYYYYYHGMDVWG 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     solid tumor comprising carcinoma cells expressing C140 antigen. The method comprises administering to the subject an amount of a human anti-CD40 monoclonal antibody that is capable of specifically binding to the CD40 antigen, the monoclonal antibody being free of significant agonist activity when bound to CD40 antigen. The method of the invention is useful for treating solid tumors expressing the CD40 cell-surface antigen, such as sarcomas or carcinoma of the lungs, breasts, ovary, skin, colon or urinary bladder, or in manufacturing medicaments for the treatment of such diseases. The present sequence represents the heavy chain of anti-CD40 monoclonal antibody CHIR-5.9. This antibody represents an antibody which can be used in the method of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The specification describes a method of treating a human subject for a solid tumor comprising carcinoma cells expressing CD40 antigen. The method comprises administering to the subject an amount of a human anti-CD40 monoclonal antibody that is capable of specifically binding to the cD40 antigen, the monoclonal antibody being free of significant agonist activity when bound to CD40 antigen. The method of the invention is useful for treating solid tumors expressing the CD40 cell-surface antigen, such as sarcomas or carcinoma of the lungs, breasts, ovary, skin, colon or urinary bladder, or in manufacturing medicaments for the treatment of such diseases. The present sequence represents a variant of the heavy chain of anti-CD40 monoclonal antibody CHIR-5.9, comprising a ser for Ala substitution at site 158. This antibody represents an antibody which can be used in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             79

Multiple myeloma is a B-cell malignancy characterized by latent accumulation of secretory plasma cells in the bone marrow, these cells having a low proliferative index and an extended life span. The disease ultimately attacks bones and bone marrow, resulting in multiple tumors and legions throughout the skeletal system. The method of the invention demonstrates cytostatic and gene therapy applications and may be useful for treating multiple myeloma or in manufacturing medicaments for the treatment of such a disease. The current sequence is that of the human anti-CD40
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Treating human subjects for multiple myeloma comprises administering to the subject an amount of a human antagonist anti-CD40 monoclonal antibody that specifically binds to the CD40 antigen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a novel method for treating a human subject for

þe

The invention relates to a novel method for treating a human subject for multiple myeloma comprising administering to the subject an amount of a human anti-CD40 monoclonal antibody that specifically binds to a human CD40 antigen expressed on the surface of a human CD40-expressing cell and that is free of significant agonist activity, where the binding of the antibody to the CD40 antigen expressed on the surface of the cell results in inhibition of the growth or differentiation of the cell. Multiple myeloma is a B-cell malignancy characterized by latent accumulation of Treating human subjects for multiple myeloma comprises administering to the subject an amount of a human antagonist anti-CD40 monoclonal antibody that specifically binds to the CD40 antigen.                        proliferative index and an extended life span. The disease ultimately statacks bones and bone marrow, resulting in multiple tumors and legions throughout the skeletal system. The method of the invention demonstrates cytostatic and gene therapy applications and may be useful for treating multiple myeloma or in manufacturing medicaments for the treatment of such a disease. The current sequence is that of the human anti-CD40 monoclonal antibody 5.9 heavy chain protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                         9

```

```
The invention describes a method of treating (M1) a human subject for cancer comprising neoplastic cells expressing CD40 antigen. The method control involves administering to the subject, a combination therapy including administration of an anti-CD40 antibody in combination with an interleukin-2 (IL-2), where the anti-CD40 antibody is the monoclonal antibody CHIR-2.9 or CHIR-12.12. (M1) is useful for treating a human subject for cancer comprising neoplastic cells expressing CD40 antigon, where the cancer is a B cell-related cancer or solid tumor. The B cell-control cancer is chosen from non-Hodgkin's lymphoma, chronic lymphocytic leukemia, multiple myeloma, B cell lymphoma, high-grade B cell lymphoma, intermediate-grade B cell lymphoma, high-grade B cell lymphoma, control lymphoma, high-grade B cell lymphoma, high-grade B cell lymphoma, control lymphoma, follicular large cell lymphoma, high-grade B cell lymphoma, control lymphoma, follicular small cleaved lymphoma, control lymphocytic leukemia, lymphoma, microal large cell lymphoma, diffuse small cleaved lymphoma, control lymphoma, mucosal associated lymphoma diffuse large cell lymphoma, machonial large B cell lymphoma, lymphoma, mocosal associated lymphoma, lymphoma, microblastic large cell lymphoma, lymphoma, microblastic lymphoma, lymphoma, lymphoma, diffuse large cell lymphoma and mantle cell lymphoma, lymphoma, lymphoma, microblastic carcinoma, lymphoma, lymphoma, nasopharyngeal colon carcinoma, prostate cancer, renal cell carcinoma, colon carcinoma, prostate cancer, renal cell carcinoma, calinoma, lymphoma, carcinoma, calinoma, lymphoma, carcinoma, carcinoma, lung carcinoma, cell carcinoma, cell carcinoma, cell carcinoma, lung cell carcinoma, cell carc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         61 SPSFQGQATISADKSISTAYLQWSSLKASDTAMYYCARHVDVGATIGGYYYYYHGMDVWG 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           79
Treating human subject for cancer comprising neoplastic cells expressing
               CD40 antigen, by administering combination therapy including administration of anti-CD40 antibody e.g. CHIR-5.9, in combination with interleukin-2, to subject.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        20 EVQLVQSGAEVKKPGESLKISCKGSGYSFTSYWIGWVRQMPGKGLEWMGIIYPGDSDTRY

cancer comparising to the subject, a combination with an enthod involves administering to the subject, a combination with an administration of an anti-CD40 antibody in combination with an inti-CD40 antibody is the monoclonal antibody CHIR-5.9 or CHIR-12.12. (MI) is useful for treating a human subject for cancer comprising neoplastic cells expressing CD40 antigen, where the cancer comprising neoplastic cells expressing CD40 antigen, where the cancer comprising neoplastic cells expressing CD40 antigen, where the cancer is a B cell-related cancer or solid tumor. The B cell-related sell-spends B cell lymphoma, high-grade B cell lymphoma, intermediate-grade B cell lymphoma, intermediate-grade B cell lymphoma, molosolastic leukemia, myelolastic leukemia, Hodgkin's disease, plasmacytoma, follicular lymphoma, follicular mixed small cleaved lymphoma, cellicular mixed small cleaved lymphoma, diffuse small lymphoma, mucosal associated lymphoma, diffuse small lymphoma, splenic lymphoma, harry cell leukemia, diffuse large cell lymphoma, mucosal associated lymphoma, lymphoma, marginal account lymphoma, manual large B cell lymphoma, myentong granulomatosis, diffuse mixed cell lymphoma, mediastinal large B cell lymphoma, lymphoma, mucosal associated lymphoma, lymphoma, molosolastic lymphoma, lymphoma, molosolastic lymphoma, lymphoma, molosolastic lymphoma, lymphoma, diffuse large cell lymphoma immunoblastic lymphoma, lymphoma, mucosal sarcinoma, breast carcinoma, breast carcinoma, gastric carcinoma, presstre carcinoma, neolia carcinoma, presste carcinoma, liver carcinoma, associate carcinoma, liver carcinoma, associate carcinoma, liver carcinoma, associate carcinoma, liver carcinoma, neolia carcinoma, presste carcinoma, liver carcinoma, neolia carcinoma, presste carcinoma, liver carcinoma, mascopharyngeal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Treating human subject for cancer comprising neoplastic cells expressing CD40 antiden, by administering combination therapy including administration of anti-CD40 antibody e.g. CHIR-5.9, in combination with interleukin-2, to subject.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          carcinoma, squamous cell carcinoma, thyroid papillary carcinoma, melanoma, ovarian carcinoma, lung carcinoma, cervical carcinoma and sarcomas. This is the amino acid sequence of human monoclonal anti-CD40-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention describes a method of treating (M1) a human subject for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim 1; SEQ ID NO 8; 204pp; English.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 40,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 33,

UPEANLING SISLEM: FULLOS/NOS-LOS SOFTWARE: PATENTIN Release #1.0, Version #1.30 (EPO) CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/09/025,769B
FILING DATE: 18-FEB-1998
PRIOR APPLICATION DATA:
APPLICATION NUMBER: EP 95 11 3021.0
FILING DATE: 18-AUG-1995
ATTORNEY/AGENT INFORMATION:
NAME: James F. Haley, Jr., Esq.
REGISTRATION NUMBER: 27,794
REFERENCE/DOCKET NUMBER: MORPHO/5
TELECOMMUNICATION INFORMATION:
TELECOMMUNICATION INFORMATION: STREET: 1251 Avenue of the Americas
CITY: New York
STATE: New York
COUNTRY: USA
ZIP: 10021 APPLICANT: Knappik, Achim
APPLICANT: Rnappik, Achim
APPLICANT: Pack, Peter
APPLICANT: Ge, Liming
APPLICANT: Moroney, Simon
APPLICANT: Plueckthun, Andreas
TITLE OF INVENTION: Protein/(Poly)peptide libraries
NUMBER OF SEQUENCES: 373
CORRESPONDENCE ADDRESS:
ADDRESSEE: James F. Haley, Jr., Esq. c/o Fish & Ne Sequence 26, Application US/09025769B Patent No. 6300064 GENERAL INFORMATION: COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS

Score 578; DB 2; Length 119; Pred. No. 6.5e-48;

Sequence 33, Application US/08665202
Patent No. 5977322
GENERAL INFORMATION:
APPLICANT: Marks, James D.
TITLE OF INVENTION: No. 5977322el High Affinity Human Antibodies to TITLE OF INVENTION: Tumor Antigens
NUMBER OF SEQUENCES: 141
CORRESPONDENCE ADDRESS: ADDRESS: ADDRESSEE: Townsend and Townsend and Crew LLP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     EVQLVQSGAEVKKPGESLKISCKGSGYSFTSYW1GWVRQMPGKGLEWMG11YPGDSDTRY

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 139, Ap
